

Claims

- 5 1. A casing of a «Russian» cigarette or like smoking device, comprising an empty mouthpiece (1) and a connected or connectable empty envelope (2), at least a part of the cavity (4) of the envelope (2) being intended to receive smoking material, characterized in that it contains a separating partition which is selectively penetrable by the smoke, installed so that at least a part of the cavity (3) of the
- 10 mouthpiece (1) could be detached from at least a part of the cavity (4) of the envelope (2), and so that it is possible to overlap at least a part of the cross section of the cavity (3) of the mouthpiece (1).
2. The casing of the «Russian» cigarette according to claim 1, characterized in that
- 15 said separating partition selectively penetrable by the smoke is made in the form of the deformed part (5) of the wall of the empty mouthpiece (1).
3. The casing of the «Russian» cigarette according to claim 2, characterized in that
- 20 said deformed part (5) of the wall of the empty mouthpiece (1) is perforated (7).
4. The casing of the «Russian» cigarette according to claim 1 characterized in that said separating partition being selectively penetrable by the smoke is made in the form of the perforated diaphragm (8).
- 25 5. The casing of the «Russian» cigarette according to claim 1 characterized in that said separating partition selectively penetrable by the smoke is made in the form of the spiral insert (9).
6. The casing of the «Russian» cigarette according to any preceding claim
- 30 characterized in that a spacing insert (12) is installed in the part of the cavity (4) of the envelope (2) intended for receiving smoking material.

7. A casing of the «Russian» cigarette or smoking device, comprising an empty mouthpiece (1) and a connected empty envelope (2) ,characterized in that the length of the empty mouthpiece (1) is not less than the length of the empty envelope (2), the empty envelope (2) overlaps the empty mouthpiece (1) with all its length, and the empty mouthpiece (1) and empty envelope (2) are such as to be displaceable relative to each other along their common longitudinal axis.
8. The casing of the «Russian» cigarette according to claim 7 characterized in that it contains a separating partition which is selectively penetrable by smoke, and installed so that it is possible to detach or withdraw at least a part of the cavity (3) of the mouthpiece (1) from at least a part of the cavity (4) of the envelope (2) and so that it is possible to overlap at least a part of the cross section of the cavity (3) of the mouthpiece (1).
9. The casing of the «Russian» cigarette according to claim 8 characterized in that said separating partition being selectively penetrable by the smoke is made in the form of the deformed part (5) of the wall of the empty mouthpiece (1).
- 10.The casing of the «Russian» cigarette according to claim 9 characterized in that said deformed part (5) of the wall of the empty mouthpiece (1) is perforated (7).
- 11.The casing of the «Russian» cigarette according to claim 8 characterized in that said separating partition selectively penetrable by the smoke, is made in the form of the perforated diaphragm (8).
- 12.The casing of the «Russian» cigarette according to claim 8 characterized in that said separating partition being selectively penetrable by the smoke, is made in the form of the spiral insert (9).
- 13.The casing of the «Russian» cigarette according to any one of claims 1 to 6 and/or of claims 7 to 12, characterized in that the empty mouthpiece (1) is made of the material with low sorption capability.

14. The casing of the «Russian» cigarette according to claim 6 characterized in that the empty mouthpiece (1) is made of the material with low sorption capability.
- 5 15. The casing of the «Russian» cigarette according to any one of claims 1, 4, 5, 8, 11, 12 characterized in that a separating partition which is selectively penetrable by the smoke, is made of the material with low sorption capability.
- 10 16. The casing of the «Russian» cigarette of claim 6 characterized in that a separating partition which is selectively penetrable for the smoke is made of the material with low sorption capability.
17. The casing of the «Russian» cigarette according to claim 7 characterized in that it contains a filter.
- 15 18. The casing of the «Russian» cigarette according to any one of claims 1 to 5 characterized in that the empty mouthpiece (1) and empty envelope (2) are installed so that it is possible to move them relatively to each other along the common longitudinal axis.
- 20 19. The casing of the «Russian» cigarette according to claim 6 characterized in that the empty mouthpiece (1) and empty envelope (2) are installed so that it is possible to move them relatively to each other along the common longitudinal axis.
